SOLVIX STOCKFLOW

USER MANUAL

A simple guide to signing in and managing stock

[SCREENSHOT SPACE: Add your preferred Solvix StockFlow logo or landing-page image]

Solvix

Prepared for new users | Version 1.0 | October 2026

1. Introduction

Solvix StockFlow helps a team keep track of products, suppliers, stock changes and sales. The web application is the main place to manage inventory records and view reports. The Android warehouse app provides guided workflows for receiving, dispatching, transferring and auditing stock.

Important: the web application and Android app currently operate separately. Data entered in the Android app is sample data stored locally and does not synchronise with the web application. Use the web application as the main system of record for live web inventory data.

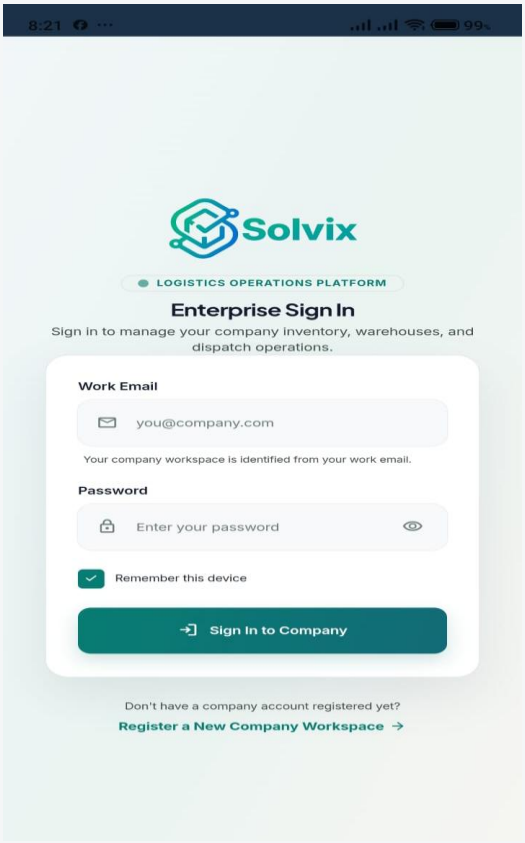

Who can use the system?

- Staff: view the dashboard, products, suppliers, sales, stock history and reports; create or edit products; record sales; and adjust stock.
- Administrators: perform staff tasks, manage user accounts, and delete products. Admins also manage suppliers.

Before you start

- Use the web application address provided by your administrator.
- You need an account that has been activated by an administrator before you can access the web application.
- Use accurate product quantities and enter a clear reason whenever you adjust stock.

[SCREENSHOT SPACE: Web application home or login page]

2. Register, sign in and get access

Registering for an account

1. Open the Solvix StockFlow web application in your browser.
2. Choose the registration option and complete the requested account details.
3. Submit the form. Your account profile is created, but access is not immediate.
4. Ask an administrator to review your account and set it to Active.

New registrations wait for administrator approval. Until the account is activated, you will not be able to start a normal website session.

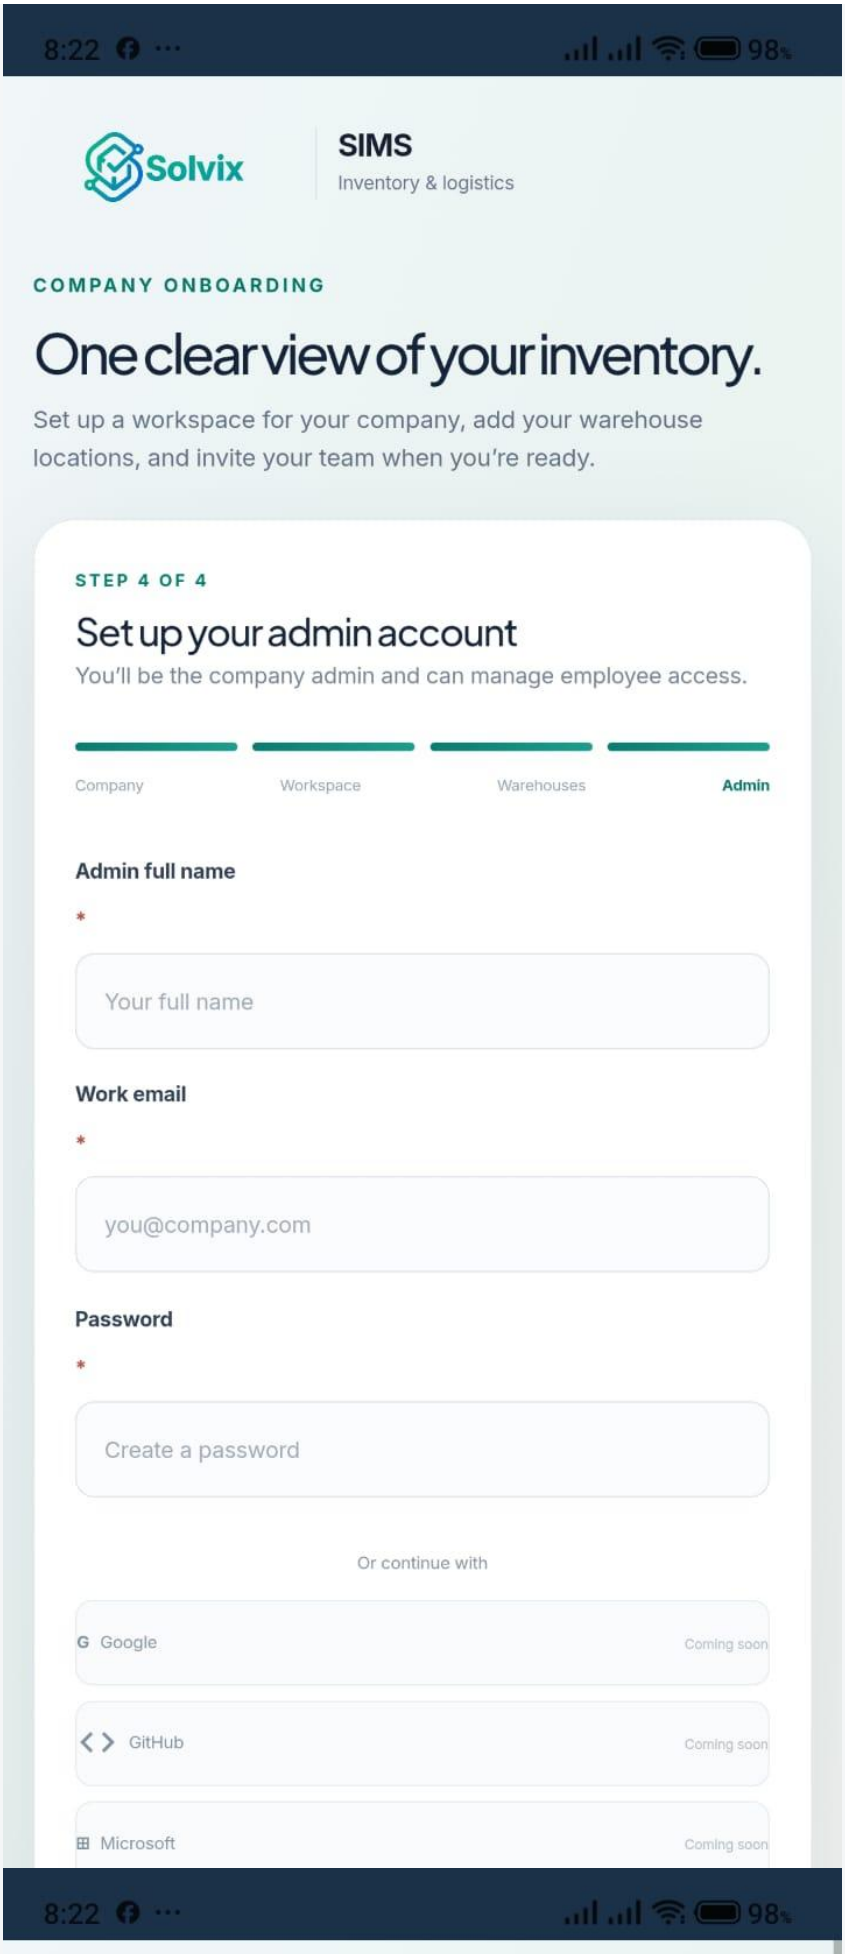

Signing in

5. Open the web application and choose Sign in.
6. Enter the email address and password associated with your account.
7. Complete the sign-in process. If your profile is active, the system opens your dashboard.

If you cannot sign in

- Check that your email address and password are correct.
- If you have just registered, ask an administrator to confirm that your profile is Active.
- If the issue continues, contact the person responsible for the system and describe the message shown.

3. Understand the dashboard

The dashboard gives you a quick overview of inventory activity. Depending on your role, it can show totals, inventory value, products that are low or out of stock, recent sales and recent stock adjustments.

- Low stock: the quantity has reached the product's minimum stock level.
- Out of stock: the available quantity is zero.
- Recent activity: review recent sales and stock changes to spot activity that may need attention.

Use the dashboard as a starting point, then open the relevant section to investigate or update a record.

[SCREENSHOT SPACE: Dashboard overview]

4. Manage products

Add a product

8. Open Products.
9. Choose the option to add a product.
10. Enter the product details requested by the form, such as its name, SKU, category, price, stock quantity and minimum stock level.
11. Review the details and save the product.

Update or find a product

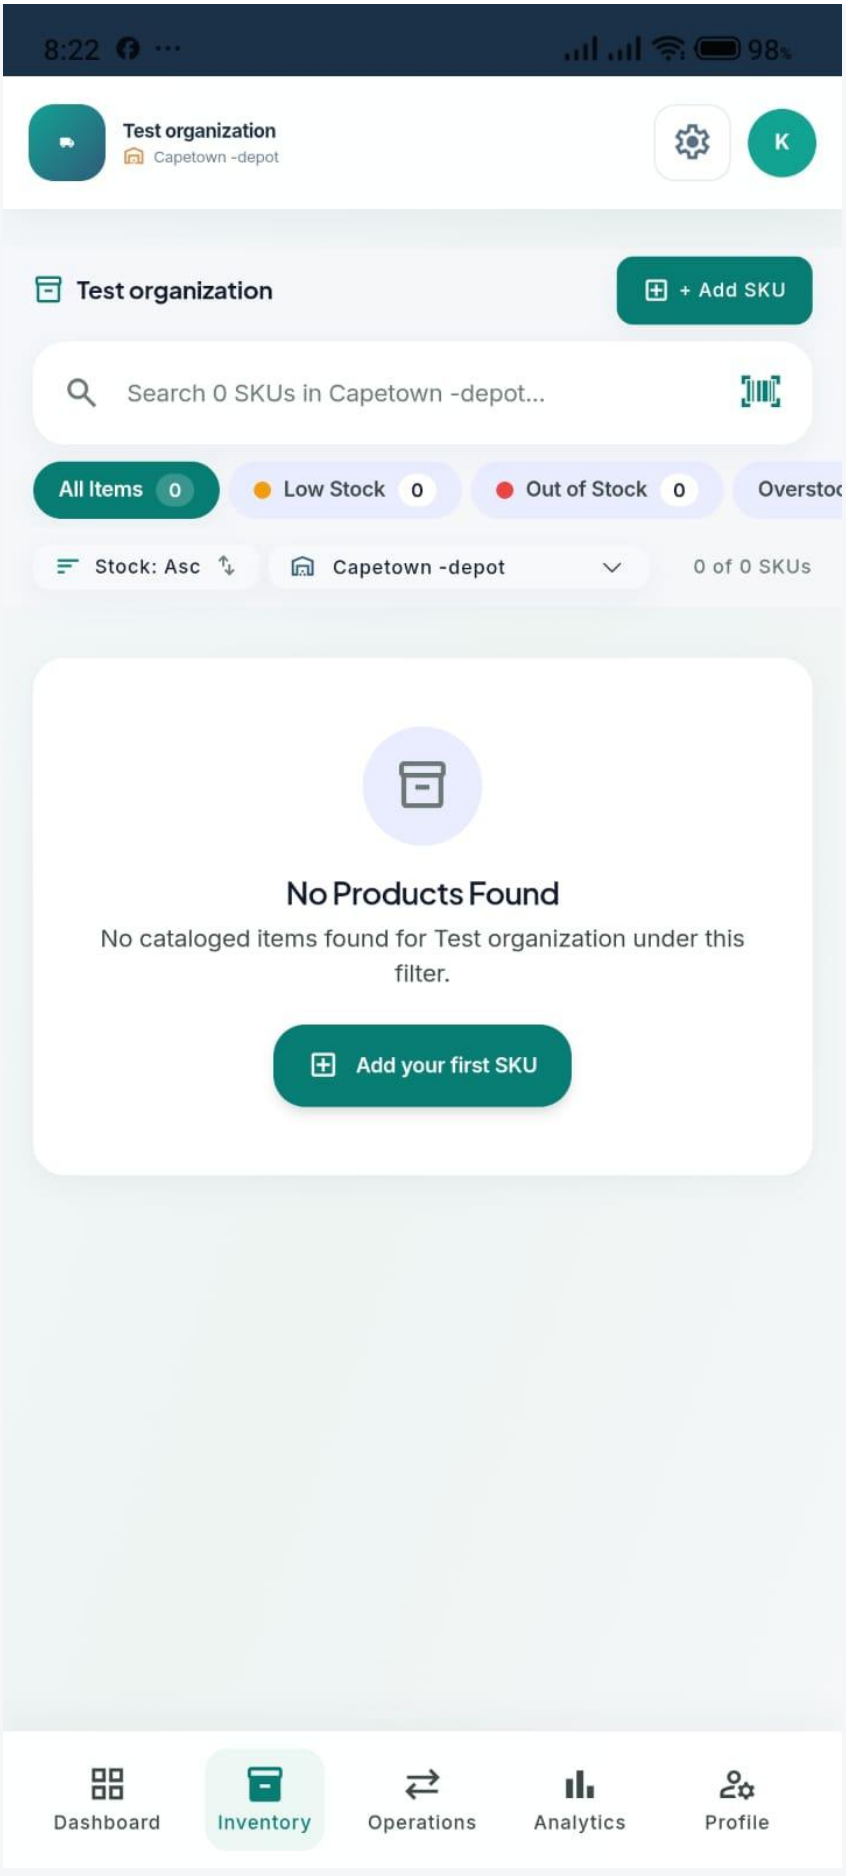

- Open the product list and locate the item you need.
- Open or edit the product record to update its details, then save your changes.
- Use a consistent product name and SKU so staff can identify the correct item.

Product stock status

StockFlow calculates a product's status by comparing its current quantity with its minimum stock level. Keep the minimum level realistic so low-stock items are flagged early.

Only administrators can delete products. If a product should no longer be used, check with an administrator before deleting it.

5. Manage suppliers

The supplier section stores supplier names and contact details for reference.

12. Open Suppliers.
13. Choose the option to add a supplier, or open an existing supplier to update its details.
14. Enter accurate contact information and save the record.

Supplier management permissions can differ between the website and API. In the website, active users may see supplier create/edit options; if an action is unavailable, ask an administrator.

[SCREENSHOT SPACE: Supplier list or supplier details]

6. Record sales, returns and transfers

Use the sales/stock-out area to record stock leaving inventory or coming back through a return. Choose the correct movement type because each type affects stock differently.

- Sale: records items sold and reduces stock.
- Return: records returned items and adds stock back.
- Transfer: records stock moved to another location or destination and reduces the quantity recorded for the product in this workflow.

15. Open the sales or stock-out section.
16. Select the relevant product and enter the quantity and other requested details.
17. Choose the correct movement type and check the information carefully.
18. Submit the record and verify the updated stock quantity.

Do not record a return as a sale or a sale as a return. If you notice a mistake, follow your organisation's correction process or contact an administrator.

7. Adjust stock and review stock history

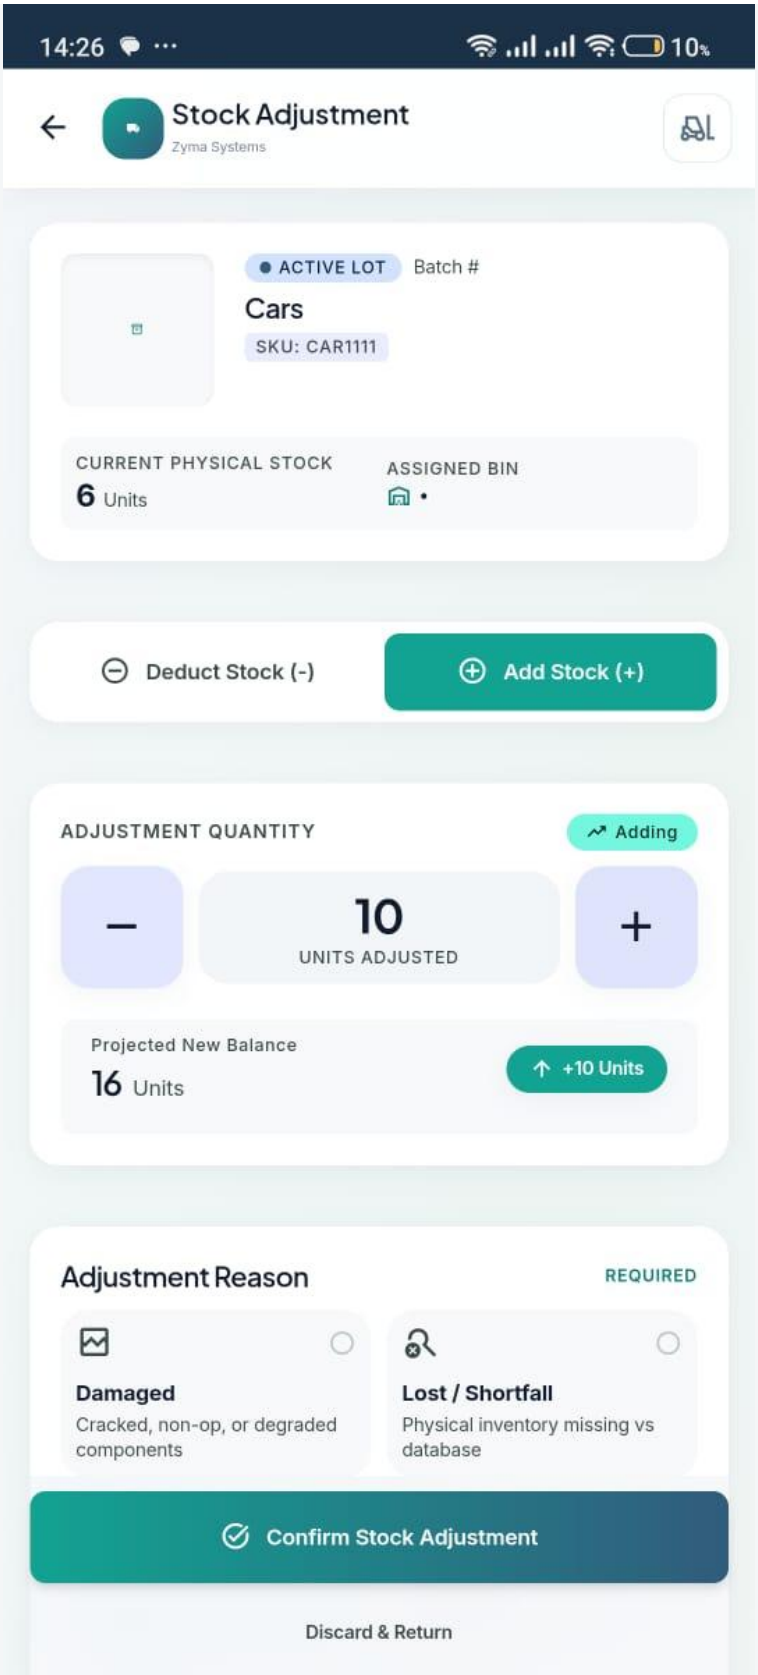

Use a stock adjustment when a physical count differs from the quantity in the system, or when stock needs to be corrected for another valid reason.

- Add: increase the recorded quantity.
- Subtract: decrease the recorded quantity.
- Set: replace the recorded quantity with the verified count.

19. Open Stock Adjustments or the stock adjustment option.
20. Select the product and adjustment type.
21. Enter the quantity and provide a clear reason for the change.
22. Submit the adjustment, then check the resulting stock quantity and history.

StockFlow records stock movements and adjustment history. Avoid making unexplained changes; the reason helps other users understand what happened.

8. Administrator: manage users

Administrators can review user profiles and control access to the website.

23. Open User Management.
24. Find the user's profile.
25. Set the user's role to Admin or Staff as appropriate.
26. Activate the account to allow access, or deactivate it when access should be removed.

Give administrator access only to people who need it. Staff accounts cannot manage users or delete products.

[SCREENSHOT SPACE: User management screen]

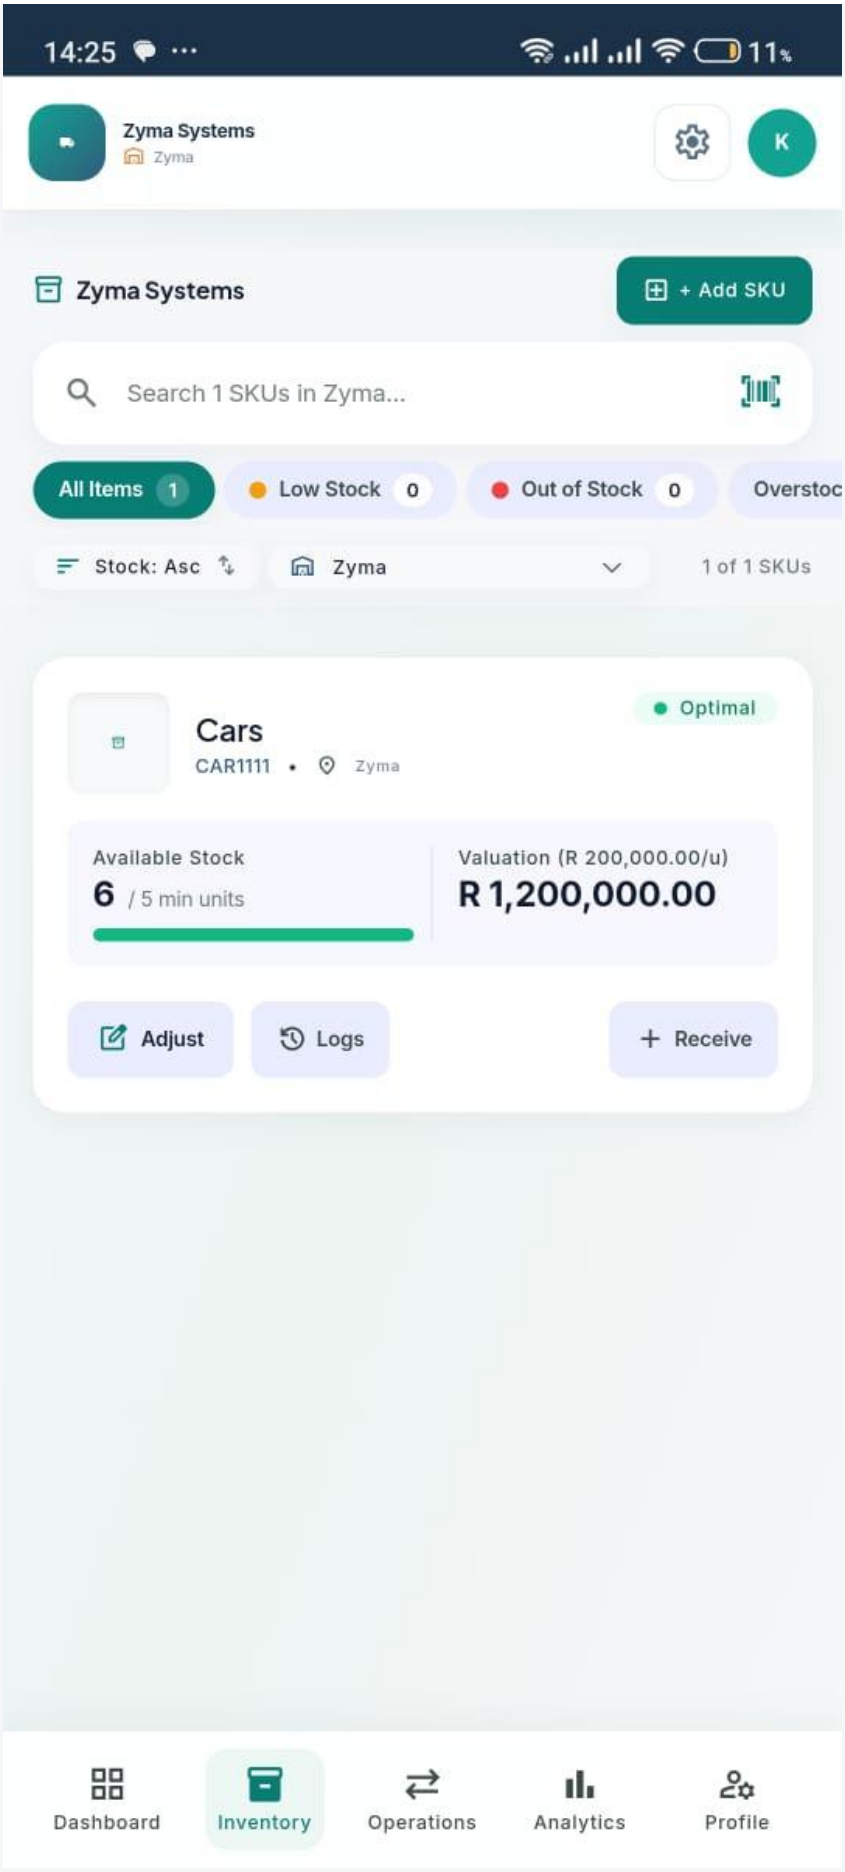

9. Android warehouse app (Solvix SIMS)

The Android app is designed for warehouse-floor workflows and includes receiving, dispatch, warehouse transfers and stock audits. It can use the device camera to scan barcodes where supported; manual code entry is available as a fallback.

27. Open Solvix SIMS on the Android device.
28. Use the sample sign-in option presented by the prototype to enter the app.
29. Choose the workflow that matches the task: receiving, dispatch, transfer or stock audit.
30. Follow the on-screen steps, scan a barcode if supported or enter the code manually, and complete any required approval steps.
31. Review the details before confirming the workflow.

Important: the Android app currently uses sample data stored locally in the app. Its prototype sign-in is not real authentication, and its data does not synchronise with the web application. Do not treat mobile entries as updates to the live web inventory.

10. Good practices and quick troubleshooting

Good practices

- Check product names, SKUs and quantities before saving.
- Record stock movements as they happen.
- Always provide a meaningful reason for stock adjustments.
- Keep supplier contact details up to date.
- Sign out or close your session when using a shared computer.

Common issues

- Account pending: ask an administrator to activate your profile.
- Product quantity looks wrong: check recent sales, returns and adjustments before changing it.
- A product is flagged low/out of stock: verify the physical count and minimum stock level.
- A menu or action is missing: your account role may not have permission to use it.
- Android changes do not appear on the website: this is expected while the two apps remain separate.

Need help?

Contact your system administrator or Solvix StockFlow support and include the page you were using, what you were trying to do, and any error message. Do not send your password.
